EDUCATION

Northeastern University, Boston, MA — Expected May 2029
B.S. in Mechanical Engineering — GPA: 3.93
Relevant Coursework: Thermodynamics, Statics, Introduction to Materials Science, Differential Equations & Linear Algebra, Calculus III
Activities: Northeastern Electric Racing (NER), American Society of Mechanical Engineers (ASME)

SKILLS

Software: SolidWorks, MATLAB, Python, MicroPython, AutoCAD
Fabrication & Hardware: 3D printing, Waterjet, Microcontrollers, Electronics, Laser Cutting, Soldering, Woodworking
Languages: English (native), Mandarin (native)

PROJECTS

Conveyor Belt Fraction Board Game | Cornerstone of Engineering 2, Northeastern University — Spring 2026

- Directed CAD development for a 14”x14”x4” board game, modeling all SolidWorks parts and the final assembly across 7 iterations to stabilize motor mounts while dropping drift by 5 mm
- Designed the drivetrain for 2 parallel conveyor belts, modeling and 3D-printing sandpaper-wrapped dowels and game pieces that were used to track players across a 12-step board game
- Coordinated a 5-person team across CAD, electronics, and MicroPython, delivering a working build on the deadline, receiving an average 8/10 rating across all criteria from 15 users

Vehicle Proximity Sensor System | Cornerstone of Engineering 1, Northeastern University — Fall 2025

- Programmed a scaled-down vehicle side-sensor system on a Raspberry Pi Pico in MicroPython, driving 2 servo-swept ultrasonic sensors with increasing frequency of LED alerts scaled to object distance within the range of 2-50 cm
- Selected the sensor design via Kepner-Tregoe decision analysis after scrapping a motion-sensor prototype, rebuilding to a fully functional demo in 3 weeks, meeting the deadline

WORK EXPERIENCE

AutoZone — Braintree, MA
Parts Sales Associate — June 2026 – Present

- Installing and replacing standard automotive components across 10+ makes, outperforming service SLA time targets for batteries, bulbs, windshield wipers, and filters
- Diagnosing electrical faults across 10+ customers per day with multimeters, OBD scanners, and battery, alternator, and starter testers to identify root causes and recommend proper repairs
- Advising 50+ customers daily on engine, brake, and suspension systems and matching OEM-spec parts to consistently exceed monthly sales targets by 35%

Advanced Materials and Microsystems Laboratory — Boston, MA
Undergraduate Research Assistant — March 2026 – Present

- Preparing and mounting 8+ sputtered magnetic thin-film samples along easy and hard axes on a GMW-3470 magnet to characterize anisotropy by using stands designed in CAD, which are made through 3d printing and waterjetting
- Measuring magnetostrictive deflection across 5+ film compositions using an optical cantilever rig, collecting data and generated strain vs. magnetic field graphs for combined analysis with graduate researchers
- Processing angle-resolved FMR measurements in MATLAB across 31 bias-field orientations and 30 field steps, producing colormaps that mapped resonance behavior for 8 devices on a test wafer

Space Zero — Braintree, MA
Sales Associate — June 2023 – August 2025; May 2026 – August 2026

- Troubleshot mechanical and technological failures across the store while communicating with customers in the process, reducing wait times during peak hours by up to 20%
- Trained and supported teammates through high-volume shifts of 250+ daily customers, consistently meeting service targets with minimal checkout delays
- Mediated 2-4 guest conflicts and behavioral issues per day on the trampoline park, ensuring park safety regulations while preserving a positive guest experience during peak hours
